Held in the 1st Biennale of Architecture in Thessaloniki, is an exhibition of works projected by students from 25 Schools of Architecture in Southeast Europe. Students and faculty members from each one of the schools came to Thessaloniki to present their exhibits and to attend a series of events that lasted for three days. Twenty Five works were separated and installed in different areas.

Each "area" was defined by a closed crooked line that included sections on the floor and walls within its boundaries. Due to the simple lines, all the separated areas have been integrated into a whole. Architectural models and drawings, videos and installations created by a new generation of architects trained today in Southeast Europe, were exhibited in designated areas to show different ways of handling various urban issues.
